

REMARKS/ARGUMENTS

In response to the Examiner's further Office Action of February 13, 2008 the Applicant respectfully submits the accompanying Amendment of the abstract, specification and claims, and the below Remarks.

Regarding Amendment

In the Amendment:

pages 1 and 2 of the specification are amended to replace the cited docket numbers with the corresponding US Application numbers;

the abstract is amended to be in proper form by omitting "comprising";

independent claim 1 is amended to clearly recite that the cartridge has the print media feed means and to specify that the drive means has a coupling arranged to couple with the print media feed means of the cartridge and a roller arranged to contact the roll of print media when the cartridge is mounted to the support structure, and that the print media is fed through the printer by operation of the roller on the roll of print media and the coupled drive and print media feed means. Support for these amendments can be found at page 14, line 22-page 15, line 16 of the present specification; and

dependent claims 2, 4, 5, 9-13, 24 and 25 are unchanged.

It is respectfully submitted that the Amendment does not add any new matter to the present application.

Regarding Specification Objections

It is respectfully submitted that the amendments of the abstract to be in proper form and the specification to update the cross-reference data on pages 1 and 2, provide the corrections required by the Examiner.

Regarding Non-Statutory Double Patenting Rejection

It is respectfully submitted that the subject matter of amended claim 1 is patentable over claim 1 of each of copending Application Nos. 10/760,237, 10/760,252 and 10/760,180 and US Patent No. 7,002,664 in view of Silverbrook et al. (US 6,443,555) and/or Koike et al. (US 2002/0192003) [it is noted that the Examiner mentions Silverbrook in the rejection text of each rejection but mentions either Silverbrook or Koike in the rejection titles], because none of these claims of the cited applications and patent combined with the disclosures of Silverbrook and/or Koike teach or suggest a photofinishing system having drive means which couples with print media feed means of a removable cartridge and a roller arranged to contact a roll of print media of the cartridge, where operation of the roller on the roll of print media and the coupled drive and print media feed means feeds the print media through a printer of the system, as is required by amended claim 1.

Regarding 35 USC 103(a) Rejections

It is respectfully submitted that the subject matter of amended independent claim 1, and claims 2, 4, 5, 9-13, 24 and 25 dependent therefrom, is not taught or suggested by Silverbrook '555, Koike, Silverbrook (US 6,238,044) and Silverbrook (US 6,439,908) either taken alone or in combination with one another, because none of these cited references teach or suggest a photofinishing system having drive means which couples with print media feed means of a removable cartridge and a roller arranged to contact a roll of print media of the cartridge, where operation of the roller on the roll of print media and the coupled drive and

print media feed means feeds the print media through a printer of the system, as is required by the claimed invention.

It is respectfully submitted that all of the Examiner's objections and rejections have been traversed. Accordingly, it is submitted that the present application is in condition for allowance and reconsideration of the present application is respectfully requested.

Very respectfully,

Applicant/s:
